

ROSCOSMOS

RUSSIAN STATE CORPORATION FOR SPACE ACTIVITIES
«ROSCOSMOS»

**State of the art and plans
for the development of
Russian space system for
Earth remote sensing**

India, Agra, 13-17 November 2016

**VALERY ZAICHKO
Russian Federation**

RUSSIAN STATE CORPORATION FOR SPACE ACTIVITIES «ROSCOSMOS»

- Now in the Russian Federation by the authorized body on outer space activities is a State Corporation «Roscosmos»

- Earth remote sensing is one of the most important directions of Roscosmos's activities

- The main document defining the development, and how to create space funding is the Federal Space Program of Russia

- In the current Russian Federal Space Program for 2016-2025 identified key issues for the creation and development of tools and technologies of remote sensing

KEY DIRECTIONS OF ROSCOSMOS ACTIVITY TO DEVELOP RUSSIAN SPACE SYSTEM FOR EARTH REMOTE SENSING

- Enlarging and improvement of Russian orbital group of satellites for Earth Remote Sensing (ERS)
- Development of ERS ground infrastructure, including complexes for acquisition and processing of space data and data distribution system
- Creation of scientific and technical background for the development of prospective ERS onboard equipment
- Improvement of legislation, rules and regulations in the field of Earth Remote Sensing Data
- Coordination with Government bodies, leading public and commercial organizations in the field of Earth Remote Sensing
- Enhancement of international cooperation

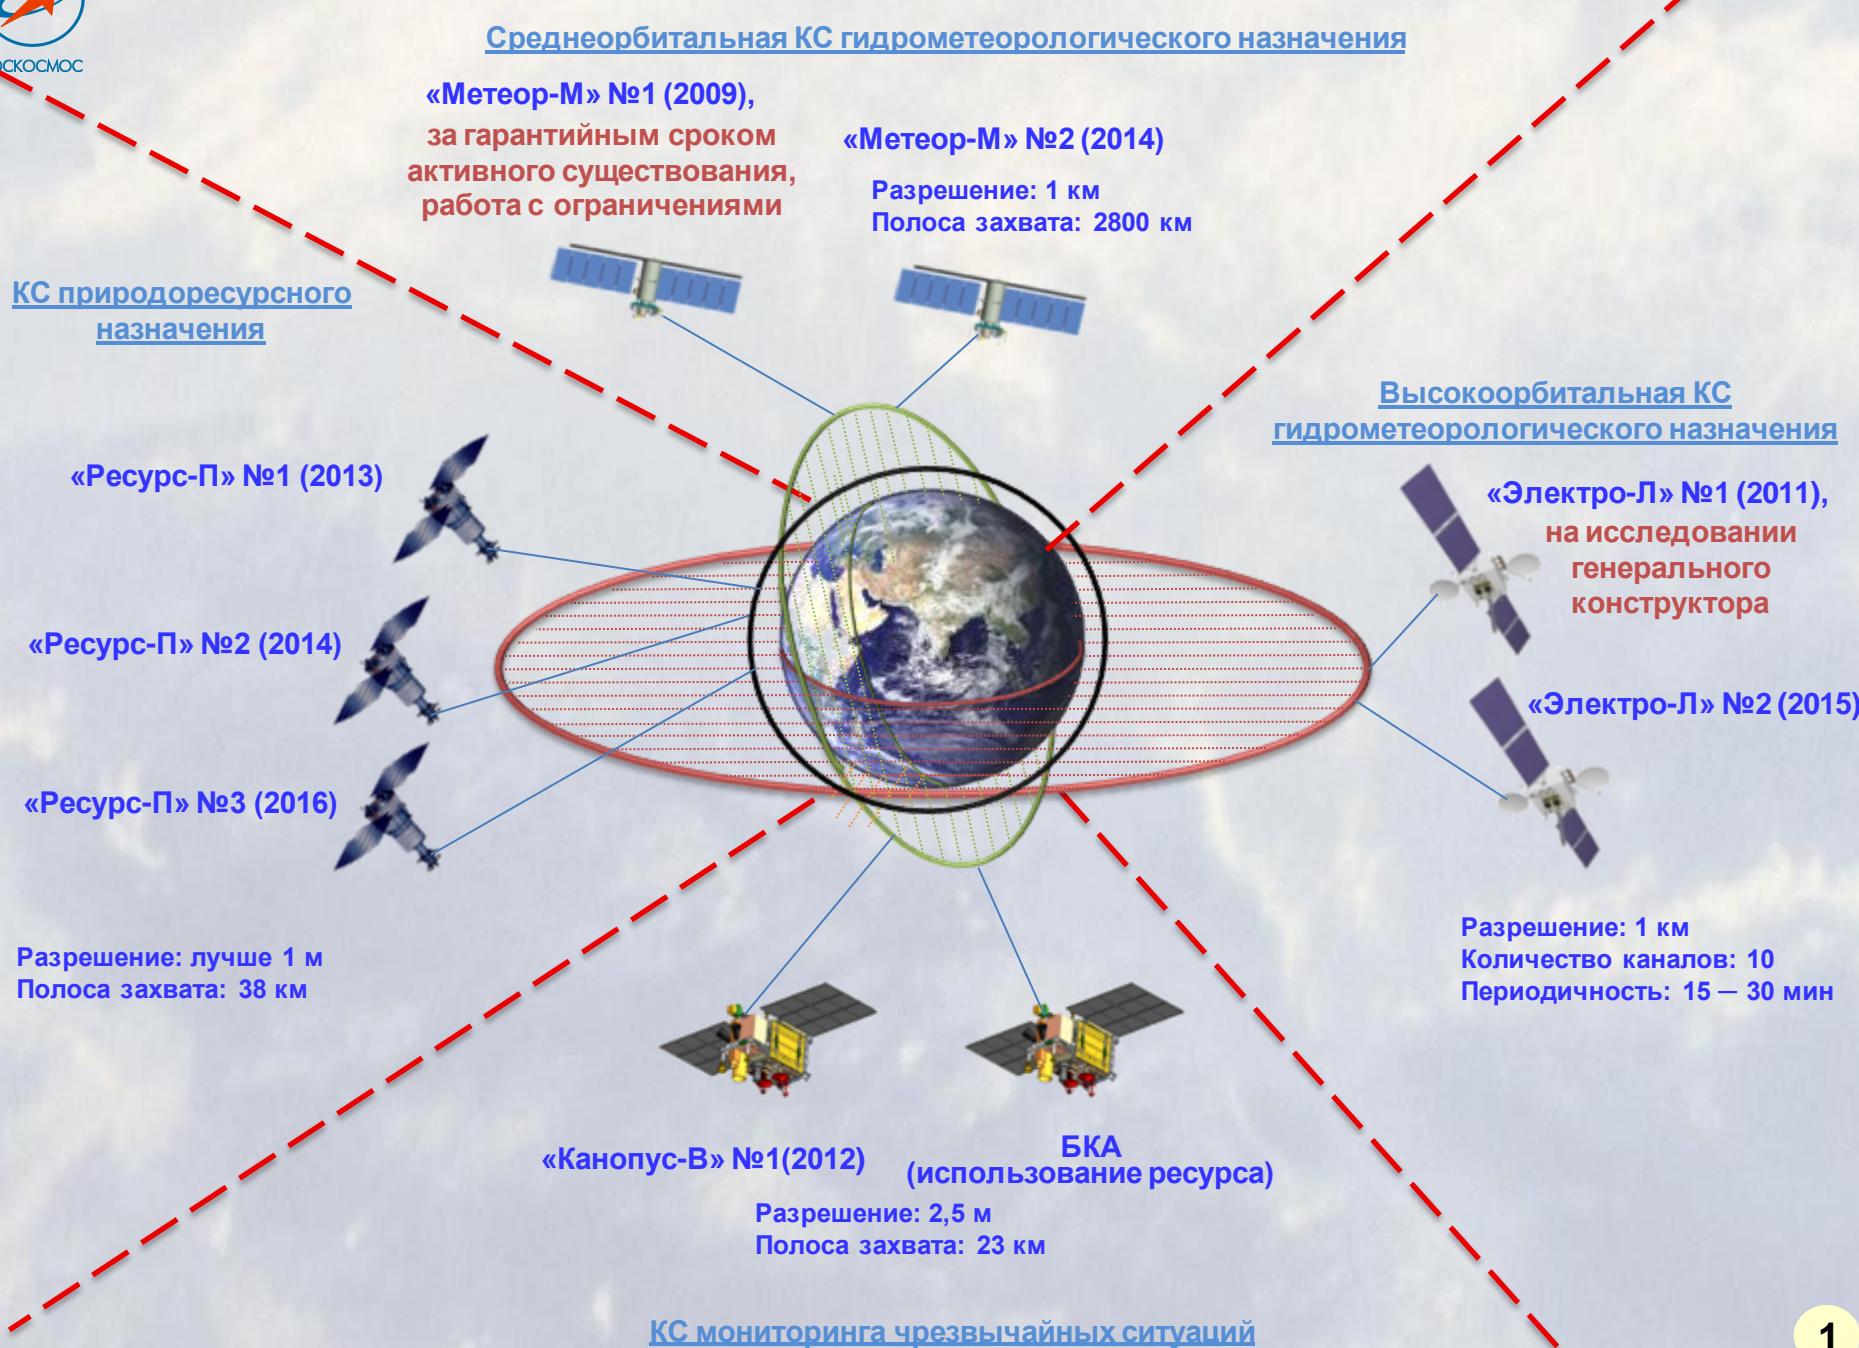

RUSSIAN REMOTE SENSING ORBITAL CONSTELLATION IN 2016:

- 3 "Resurs-P" № 1, № 2 and № 3 with high resolution (better than 1 meter) optical sensor, wide capture multispectral optical sensors (with high – 12 meters and medium – 60 meters resolution) and hyperspectral optical sensor (with 30 meters resolution)
- 1 "Kanopus-V" with panchromatic optical system (with 2.5 meters resolution) and a multispectral optical system (with 12 meters resolution/
- 2 Hydro-meteorological satellite "Meteor-M" № 1 and № 2 (with 50-70 meters resolution and 1000 kilometers swath width). It's also used for global monitoring of the Russia territory for 2 or 3 days
- 2 Hydro-meteorological geostationary space complex "Elektro-L" № 1 and № 2 with the every 30 minutes global observation of the Earth

СОСТОЯНИЕ КА К С ДЭВА 1 НОЯБРЯ 2016 ГОДА

Russian orbital group provides all types and modes of imagery in the optical range

“RESURS-P”

Mission purpose: the RESURS-P satellite is designed to observe the Earth's surface and to radio link the data acquired to ground complexes of data receiving, processing and dissemination for addressing a wide range of tasks to the benefit of various consumers as well as to use for developing an international cooperation of Russia in the environmental control and other actual problems relevant to the Earth remote sensing

“KANOPUS-V”

Mission purpose: panchromatic and multi-spectral imaging of the Earth

Applications Areas:

✓ creation and update of maps (scale 1 : 25 000 and smaller);

✓ environmental ecological monitoring;

✓ natural and man-caused emergency situations monitoring;

✓ respond to agriculture and forestry challenges;

✓ socio-economic infrastructure monitoring

Main Characteristics

Launch data	July, 22 2012
Designed by	Joint Stock Company “Research and Production Corporation Space Monitoring Systems, Information & Control and Electromechanical Complexes” named after A.G. Iosifian”
Orbit	Circular sun-synchronous Inclination Height average
	97.436 deg 510 km
Sensor	PSS (Panchromatic Optical System)
Spectral bands	Panchromatic: 0.54 - 0.86 µm
Spatial resolution	2,5 m
Swath width	23 km
Sensor	MSS (Multispectral Optical System)
Spectral bands	Blue: 0.46 - 0.51 µm Green: 0.51 - 0.60 µm Red: 0.63 - 0.69 µm Near Infrared: 0.75 - 0.84 µm
Spatial resolution	12 m
Swath width	20 km

“METEOR-M” / KMSS

Mission objective: hydrometeorological supervision, research of natural resources of the Earth and ecological monitoring

Main Characteristics

Solved problems:

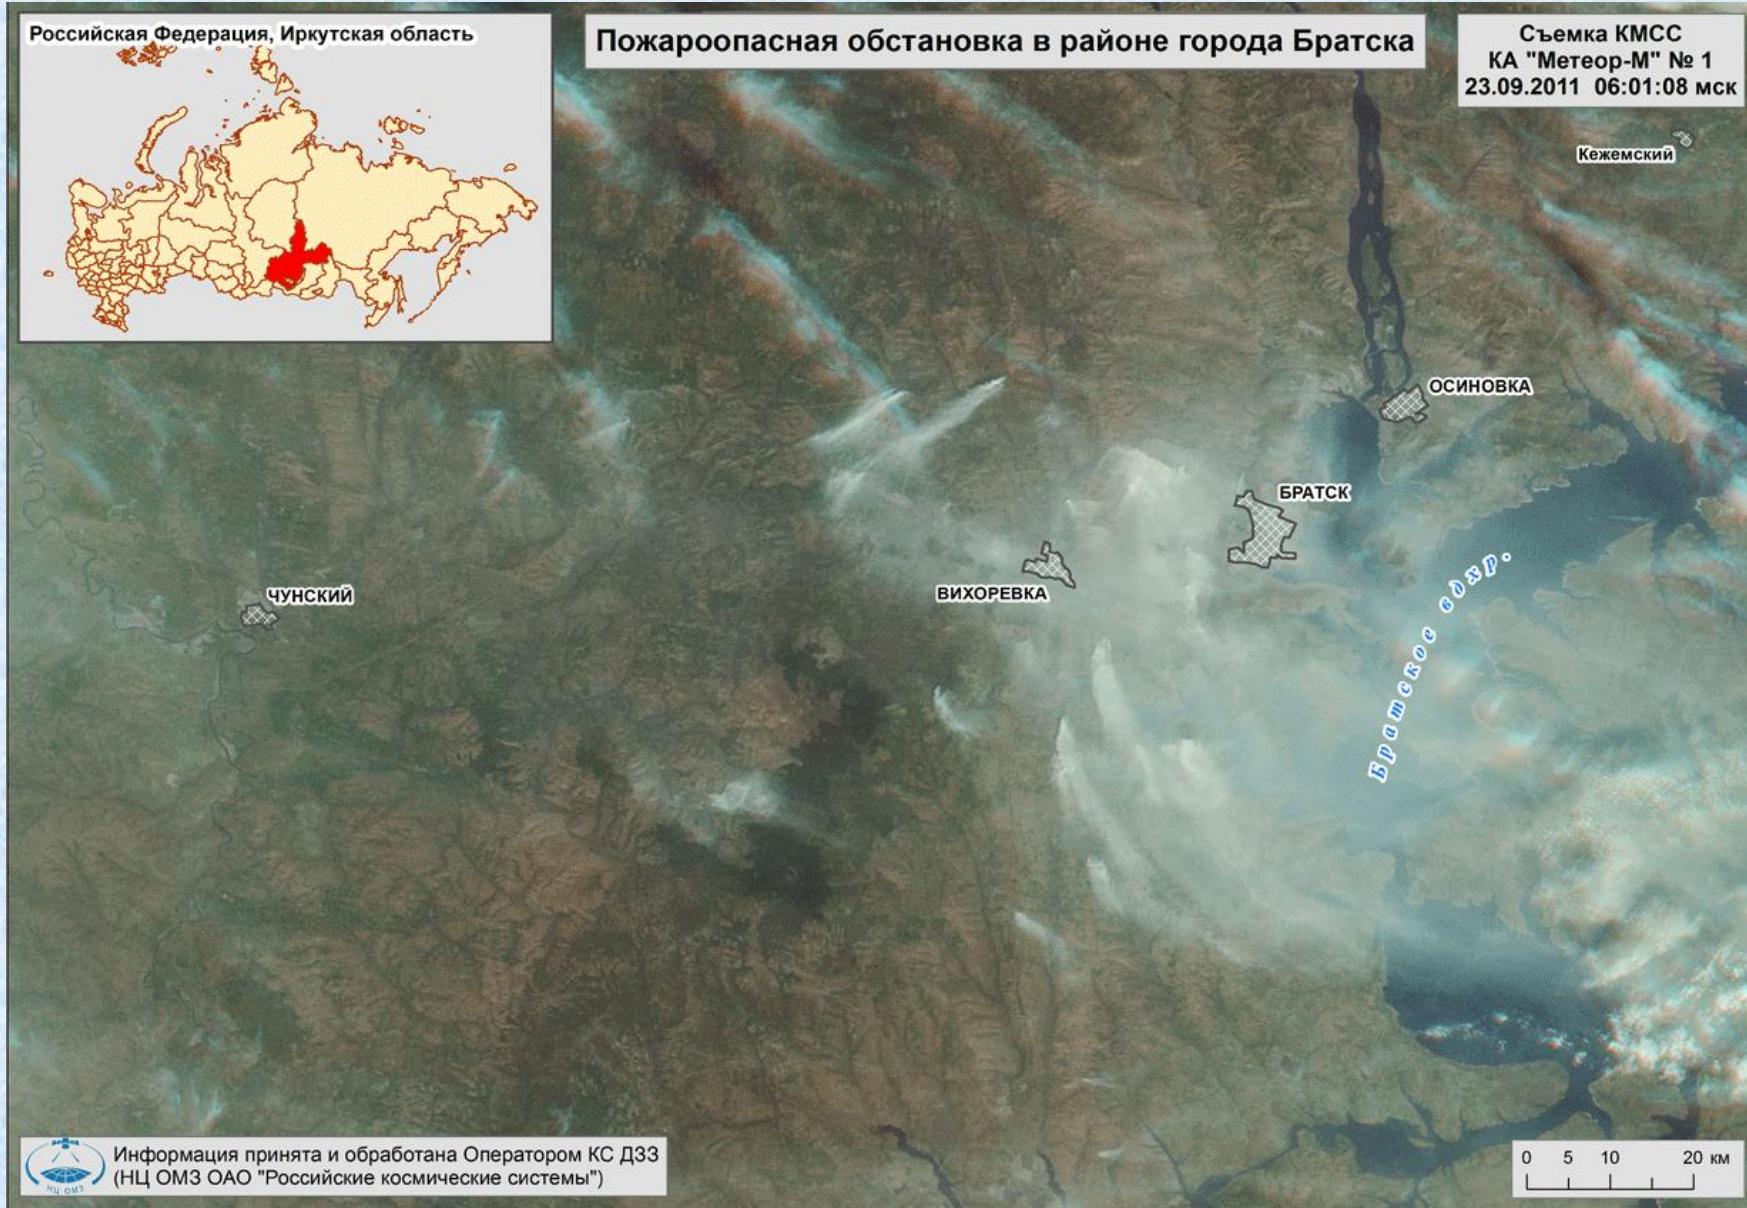

- ✓ reception of the initial hydrometeorological data on a global scale for weather forecasting;
- ✓ control of the dangerous weather phenomena and the prevention of their approach;
- ✓ climate forcing control and the Earth global changing monitoring;
- ✓ radiation and heliogeophysical conditions control in near-Earth space in interests of flights' safety, steady radio communication, men health

Launch date	17 September 2009		
Designed by	Joint Stock Company “Research and Production Corporation Space Monitoring Systems, Information & Control and Electromechanical Complexes” named after A.G. Iosifian”		
Orbit	Circular sun-synchronous Inclination Height average	98.85 deg 835 km	
Sensor	KMSS (Multispectral Medium resolution System) MSU-100 MSU-50		
Spectral bands, μm	MSU-100 Green: 0.535 - 0.575 Red: 0.630 - 0.680 Near Infrared: 0.760 - 0.900	MSU-50 Blue: 0.370 - 0.450 Green: 0.450 - 0.510 Red: 0.580 - 0.690	
Spatial resolution	60 m	120 m	
Swath angle	39 deg		
Swath width	900 km		
Radiometric resolution	10 bits per pixel		
Temporal resolution (at 60 deg latitude)	3 days		
Scientific instruments	MTVZA-GYa, GGAK-M, BIS, BRK SSPD		

"METEOR-M" №1 / KMSS DATA

Fires monitoring, Russia Federation, Irkutskaya oblast, 2011

Mission objective: hydrometeorological supervision, research of natural resources of the Earth and ecological monitoring

Main Characteristics

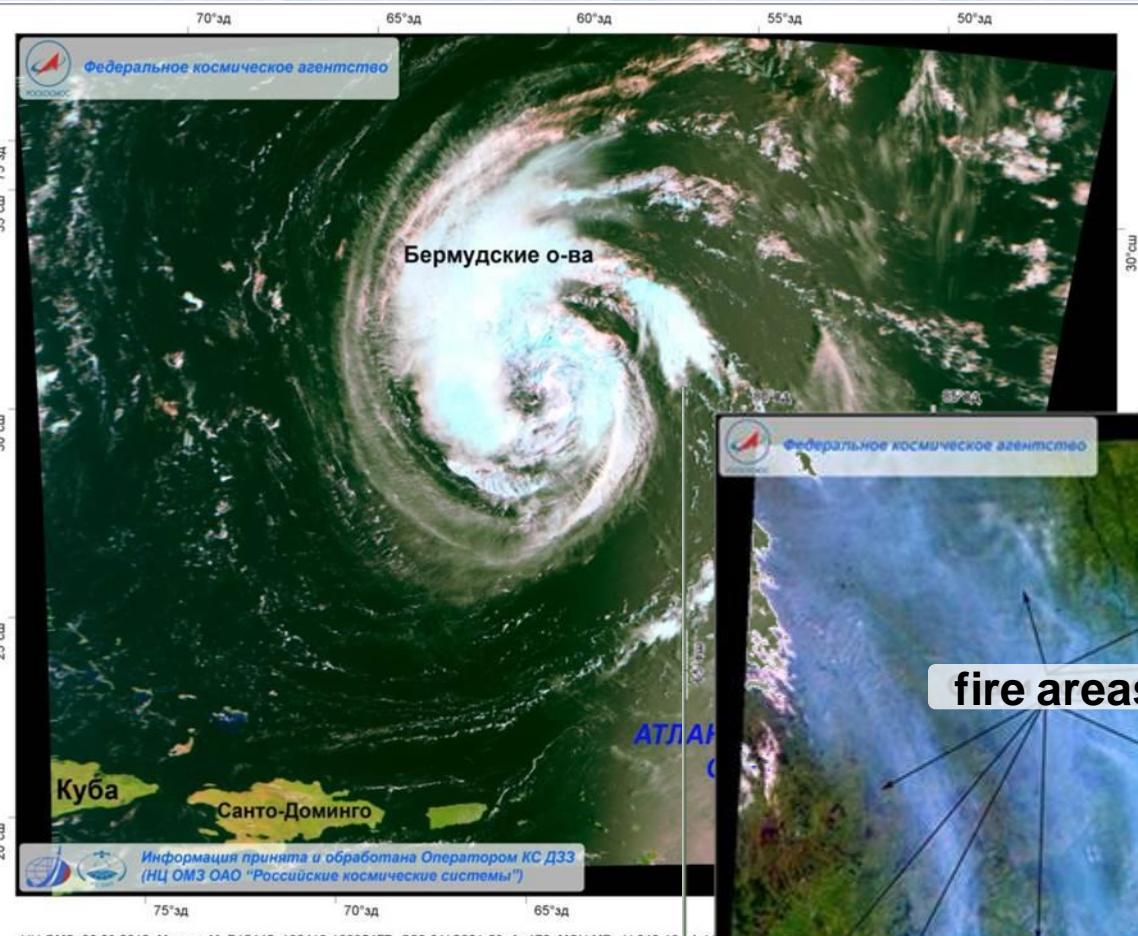

Solved problems:

- ✓ reception of the initial hydrometeorological data on a global scale for weather forecasting;
- ✓ control of the dangerous weather phenomena and the prevention of their approach;
- ✓ climate forcing control and the Earth global changing monitoring;
- ✓ radiation and heliogeophysical conditions control in near-Earth space in interests of flights' safety, steady radio communication, men health

Launch date	17 September 2009		
Designed by	Joint Stock Company ‘Research and Production Corporation Space Monitoring Systems, Information & Control and Electromechanical Complexes’ named after A.G. Iosifian’		
Orbit	Circular sun-synchronous Inclination Height average	98.85 deg 835 km	
Sensor	MSU-MR (Multispectral Low Resolution Optical Instrument)		
Spectral bands	Red: Near Infrared: Short-wavelength Infrared: Mid-wavelength Infrared: Thermal Infrared: Thermal Infrared:	0.50 - 0.70 µm 0.70 - 1.10 µm 1.60 - 1.80 µm 3.50 - 4.10 µm 10.50 - 11.50 µm 11.50 - 12.50 µm	
Spatial resolution	1 000 m		
Swath width	2 800 km		
Radiometric resolution	10 bits per pixel		
Temporal resolution	1 day		
Scientific instruments	MTVZA-GYa, GGAK-M, BIS, BRK SSPD

“ELEKTRO-L” № 1, 2

Mission purpose: ELEKTRO-L geostationary hydrometeorological spacecraft is designed for operational imaging of cloud cover and the Earth's underlying surface, heliogeophysical measurements, hydrometeorological and housekeeping data collection and relaying

Application Areas:

✓ **operative (15-30 min) reception of cloud and Earth underlying surface images;**

✓ **weather analysis and forecast in regional and Global scale;**

✓ **aircraft safety flight requirements analysis and forecast;**

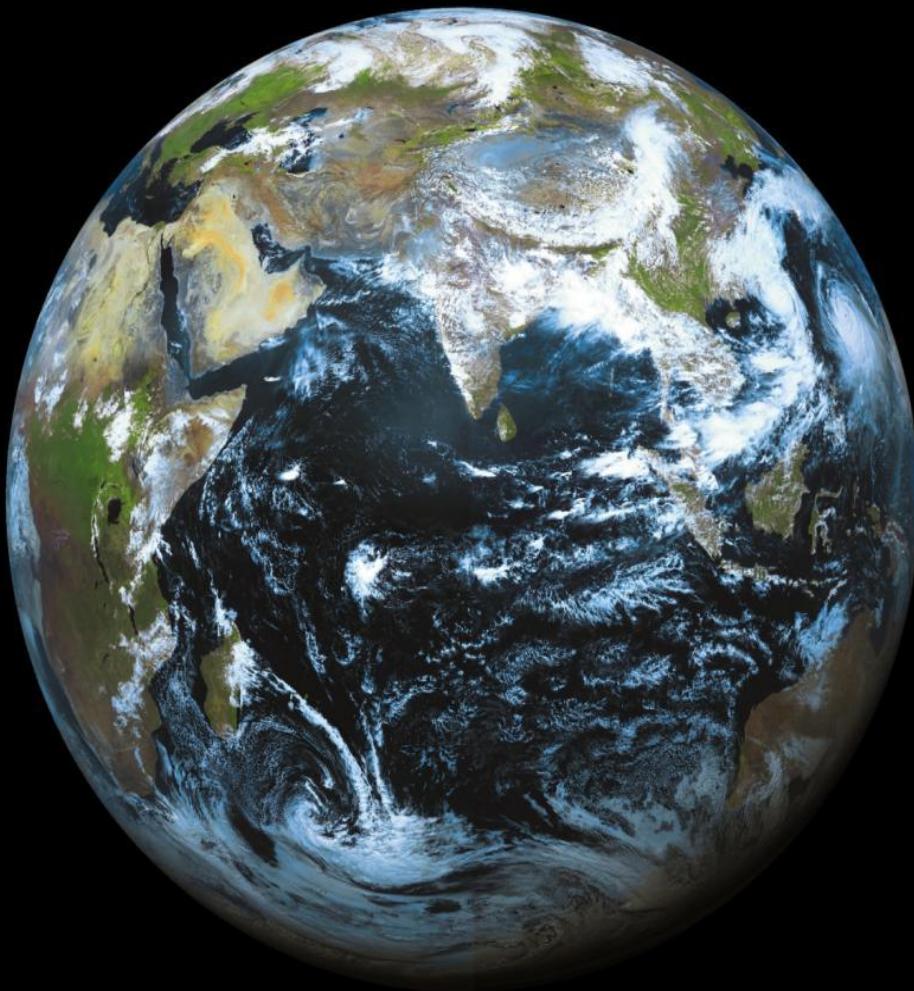

✓ **sea and ocean conditions analysis and forecast;**

✓ **climate and global changes monitoring;**

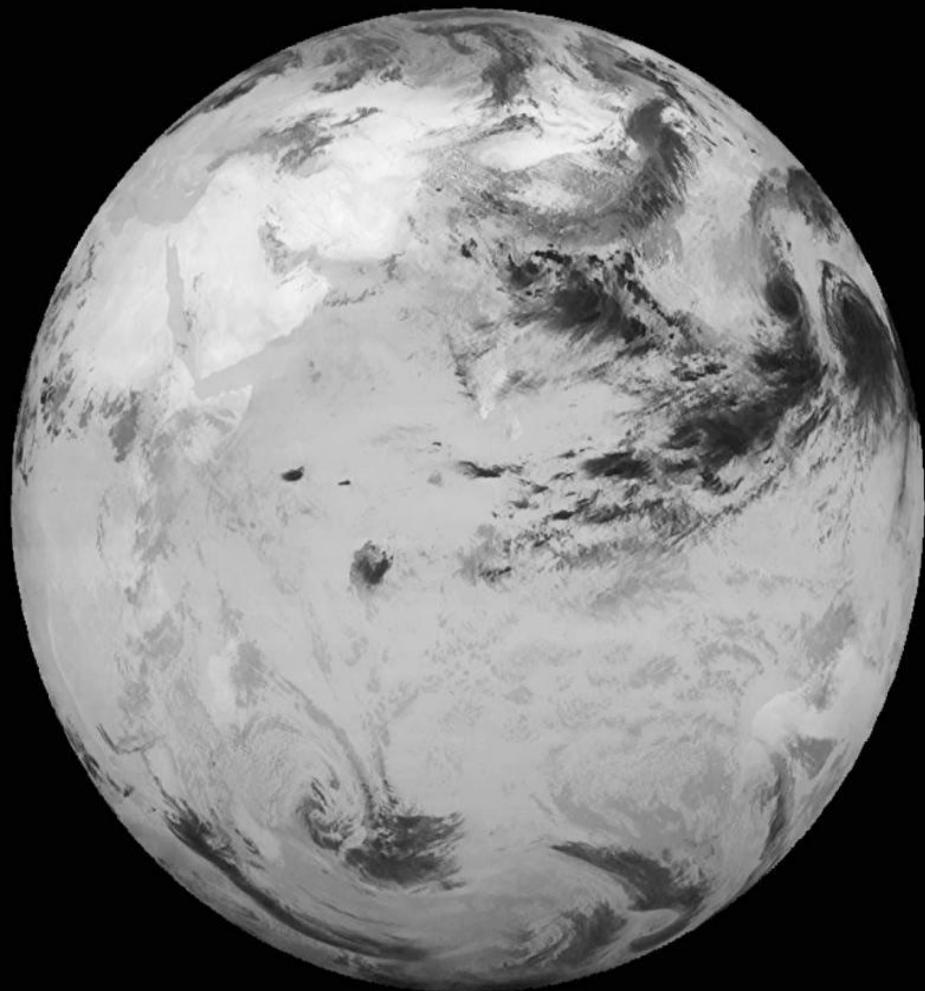

✓ **environmental ecological monitoring**

Main Characteristics

Launch date	20 January 2011		
Designed by	Lavochkin Research and Production Association		
Orbit	Geostationary sun-synchronous	Standing point	76 ged E
	Inclination	not more than 0.5 deg	36 000 km
Height			
Sensor	MSU-GS (Geostationary Multiband Scanning Instrument)		
Spectral bands	Visible: Mid-wavelenght Infrared: Thermal Infrared:	0.46 - 0.70 µm 6.0 - 7.0 µm 10.5 - 12.5 µm	
Spatial resolution	Visible band Infrared bands	1 000 m 4 000 m	
Temporal resolution	30 min in case of emergency situations - 15 min		
Swath width	All visible part of globe		
Around the Earth orbital period	24 hours		
Geophysical scientific instrument	GGAK-E		

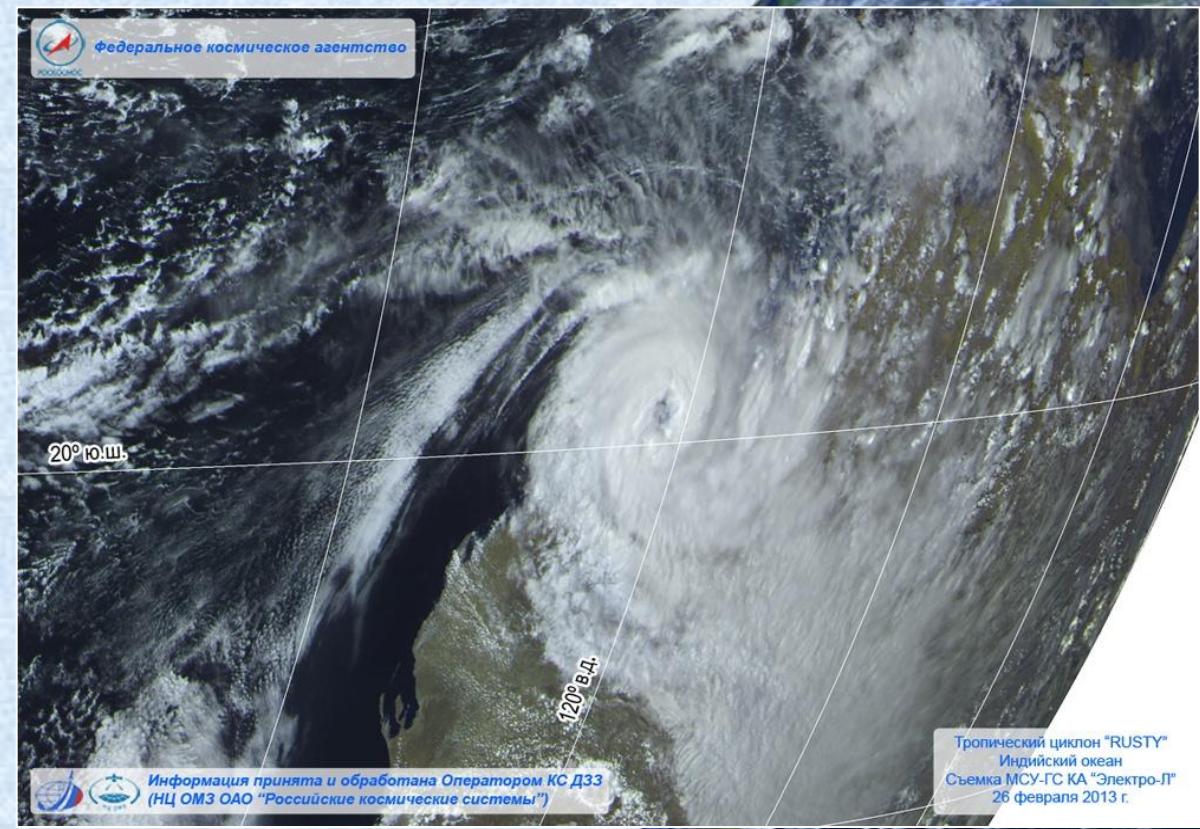

Видимый диапазон (RGB)

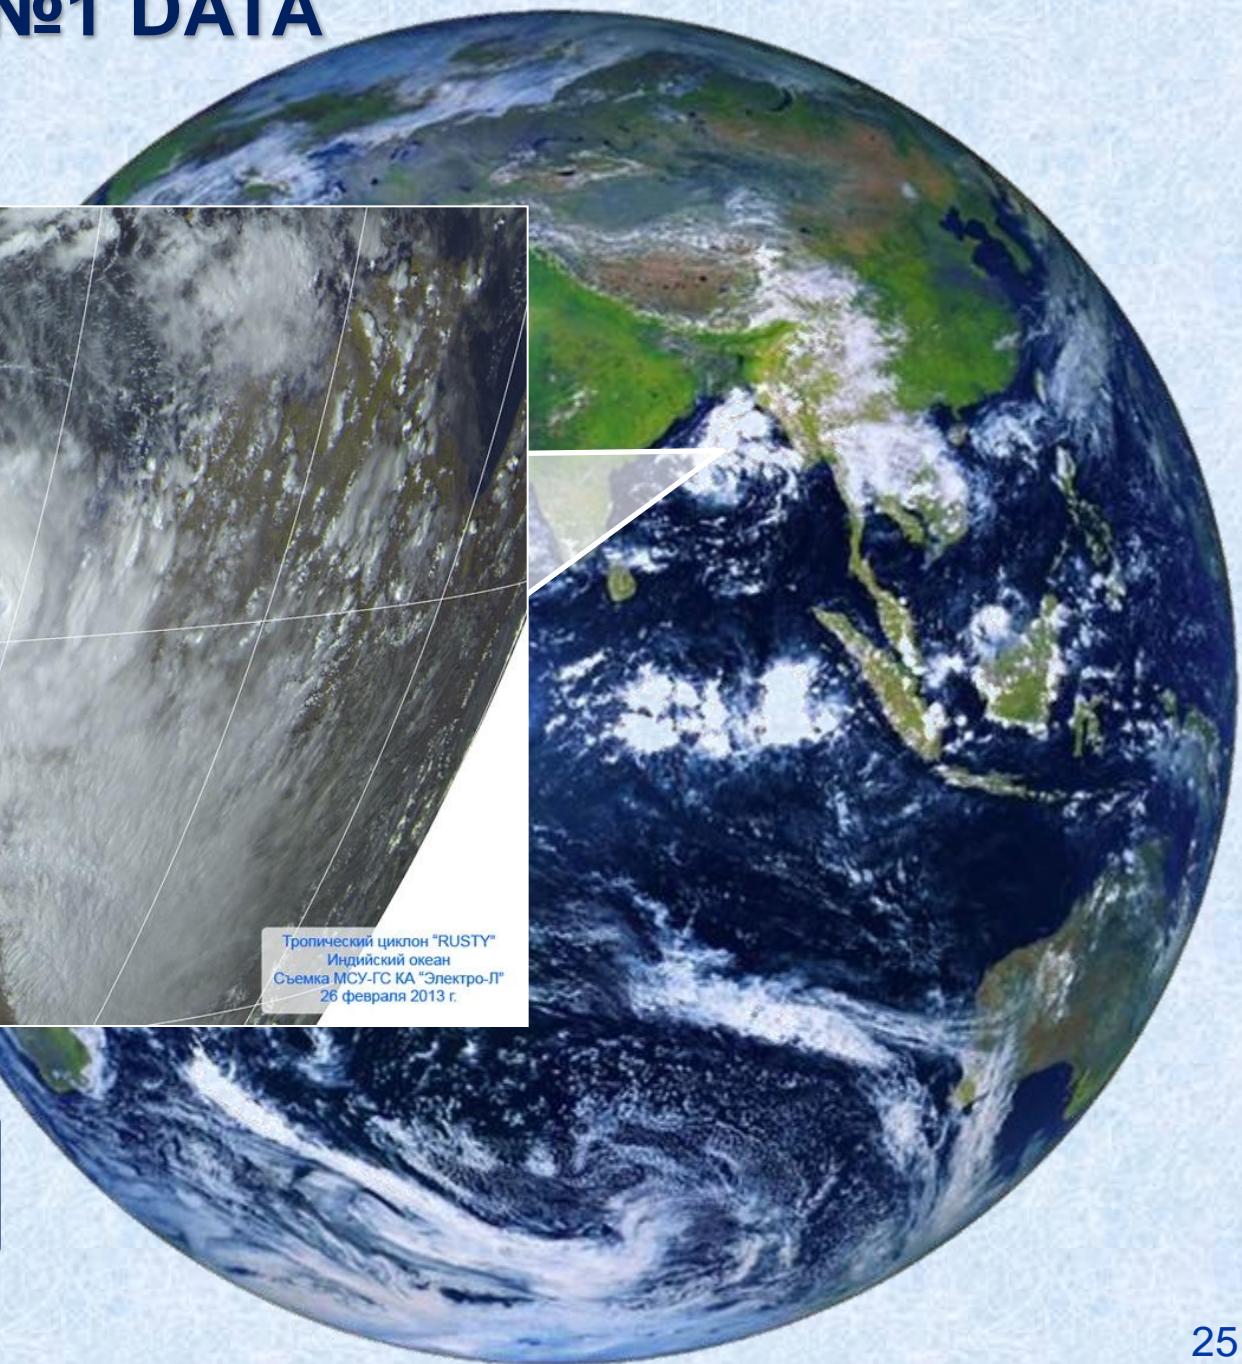

Инфракрасный канал (10,2-11,2 нм)

“ELEKTRO-L” №1 DATA

Indian Ocean,
“Rusty” cyclone
February 26, 2013

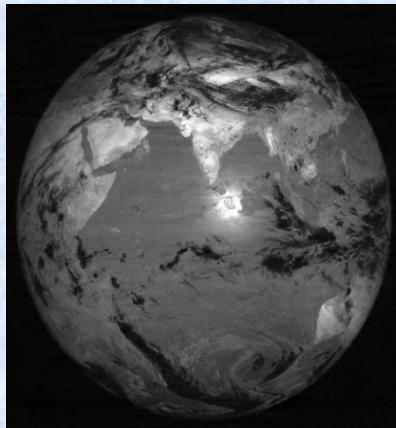

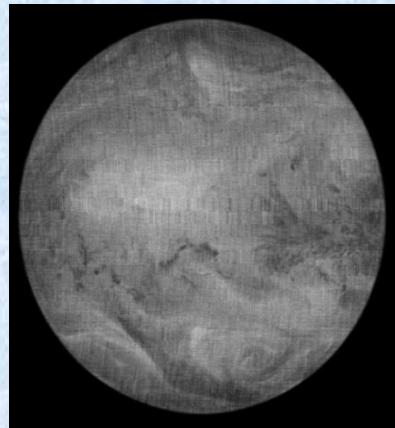

THE AMOUNT OF "ELEKTRO-L" DATA PRODUCED IN THE SHOOTING SESSION FOR 5 MINUTES

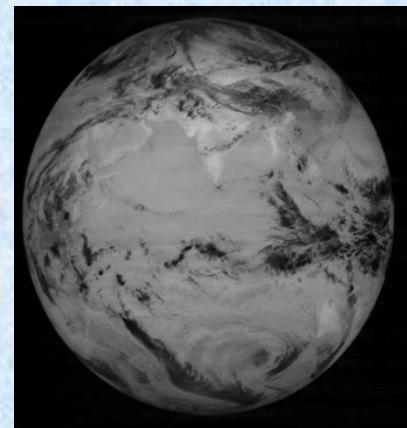

$\Delta\lambda = 0,65 - 0,9 \text{ mm}$

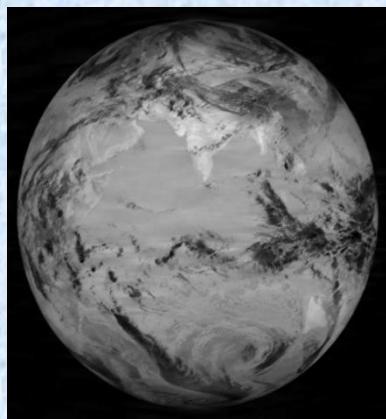

$\Delta\lambda = 3,5 - 4,0 \text{ mm}$

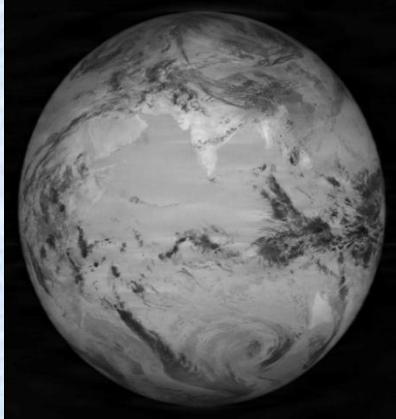

$\Delta\lambda = 5,7 - 7,0 \text{ mm}$

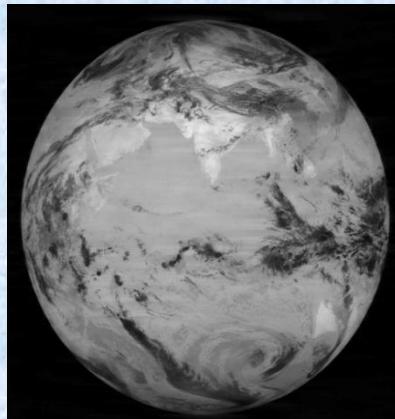

$\Delta\lambda = 7,5 - 8,5 \text{ mm}$

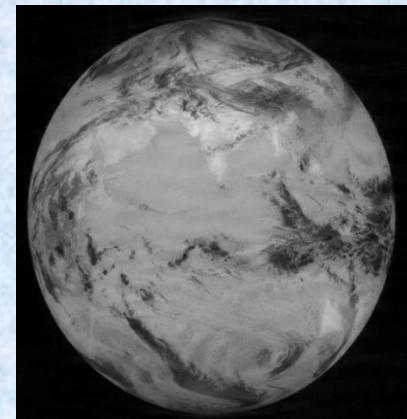

$\Delta\lambda = 8,2 - 9,2 \text{ mm}$

$\Delta\lambda = 9,2 - 10,2 \text{ mm}$

$\Delta\lambda = 10,2 - 11,2 \text{ mm}$

$\Delta\lambda = 11,2 - 12,5 \text{ mm}$

IN 2017 RUSSIAN FEDERATION WILL BE LAUNCH 2 REMOTE SENSING SATELITES:

- “Kanopus-V“-IK with panchromatic optical system (with 2.5 meters resolution) and a multispectral optical system (with 12 meters resolution) and infrared camera
- Hydro-meteorological satellite "Meteor-M" № 2-1 (with 50-70 meters resolution and 1000 kilometers swath width). It's also used for global monitoring of the Russia territory for 2 or 3 days

The development of “Resurs-P” space system, consisting of 3 satellites - the key specific feature of remote sensing data receiving.

The launch of “Resurs-P” № 3 is
scheduled for
March 12, 2016.

This will allow to increase the capabilities for obtaining high-resolution data up to 500.000 km² per day and to ensure high frequency of image acquisition (up to once per day).

Thus, by the end of 2017 Russian remote sensing orbital constellation will consist of 10 satellites:

- 3 "Resurs-P" satellites with 0,8 metre resolution, a hyperspectral optical sensor (25 metres) and wide capture multispectral optical sensors (12/25 metres);
- 2 "Kanopus-V" satellites with a panchromatic optical system with 2.5 metres resolution and a multispectral optical system with 12 metres resolution, including one satellite with an infrared camera;
- 3 hydro-meteorological satellites "Meteor-M" (the final stage of flight tests) with a multispectral optical system with 50-70 metres resolution and 1000 kilometres swath width.
- 2 hydro-meteorological geostationary space complex "Elektro-L" with an optical system for the Earth global observation every 30 minutes.

Remote sensing orbital constellation operates via ground-based infrastructure required for data receiving, processing, storage and dissemination in order to provide customers with space information

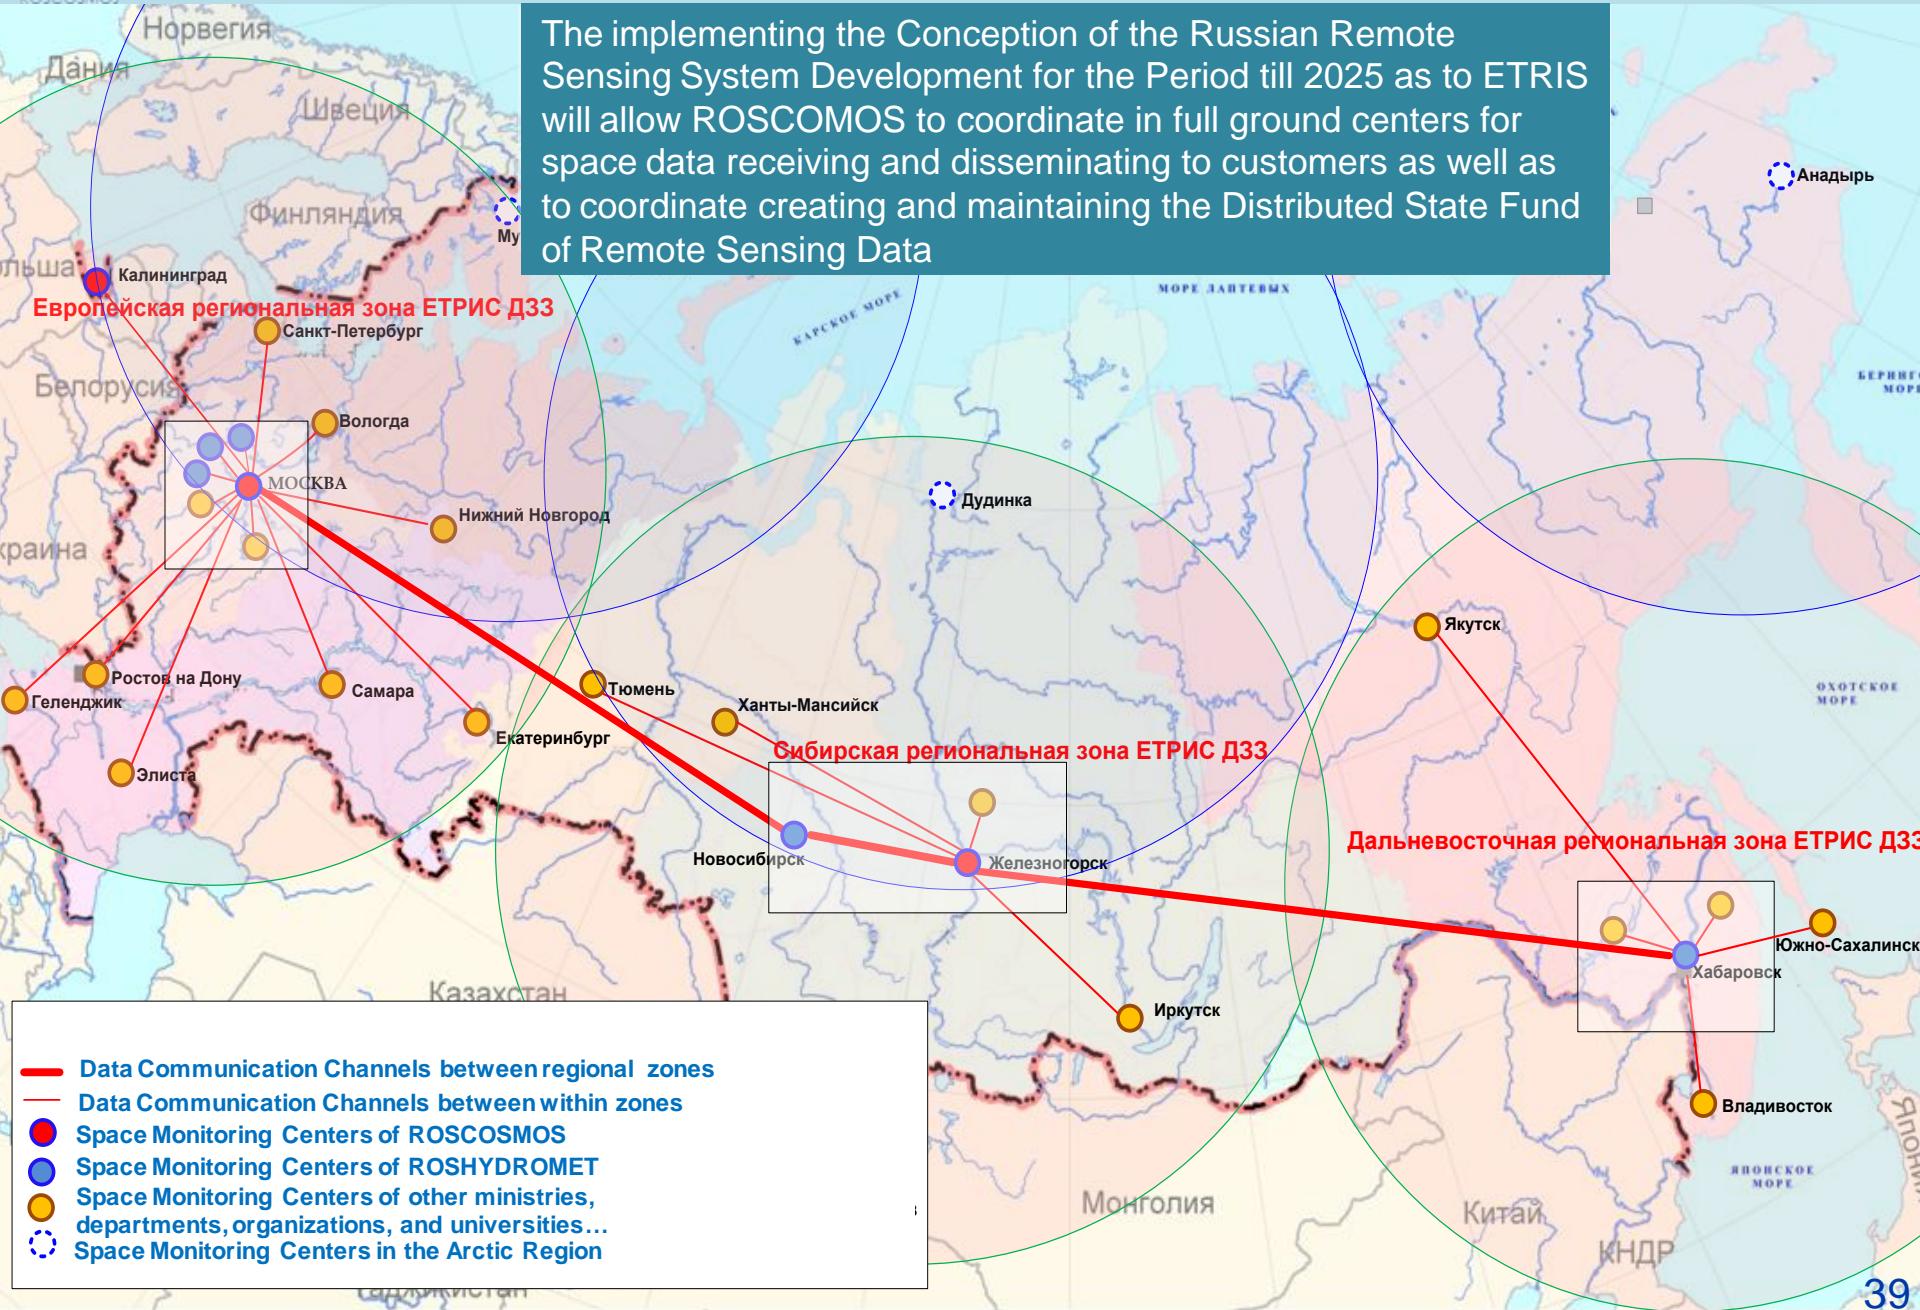

ETRIS DZZ constitute the basis of remote sensing centers and points to obtain space information posted throughout the territory of the Russian Federation.

In 2016-2017, planned to develop three large reception center in the north of the country in the areas of Murmansk, Anadyr and Dydinka that will provide complete coverage of the territory of the Russian input areas

ETRIS DZZ

The implementing the Conception of the Russian Remote Sensing System Development for the Period till 2025 as to ETRIS will allow ROSCOMOS to coordinate in full ground centers for space data receiving and disseminating to customers as well as to coordinate creating and maintaining the Distributed State Fund of Remote Sensing Data

- Data Communication Channels between regional zones
- Data Communication Channels between within zones
- Space Monitoring Centers of ROSCOSMOS
- Space Monitoring Centers of ROHYDROMET
- Space Monitoring Centers of other ministries, departments, organizations, and universities...
- Space Monitoring Centers in the Arctic Region

INFORMATION SERVICES. ROSCOSMOS'S GEOPORTAL

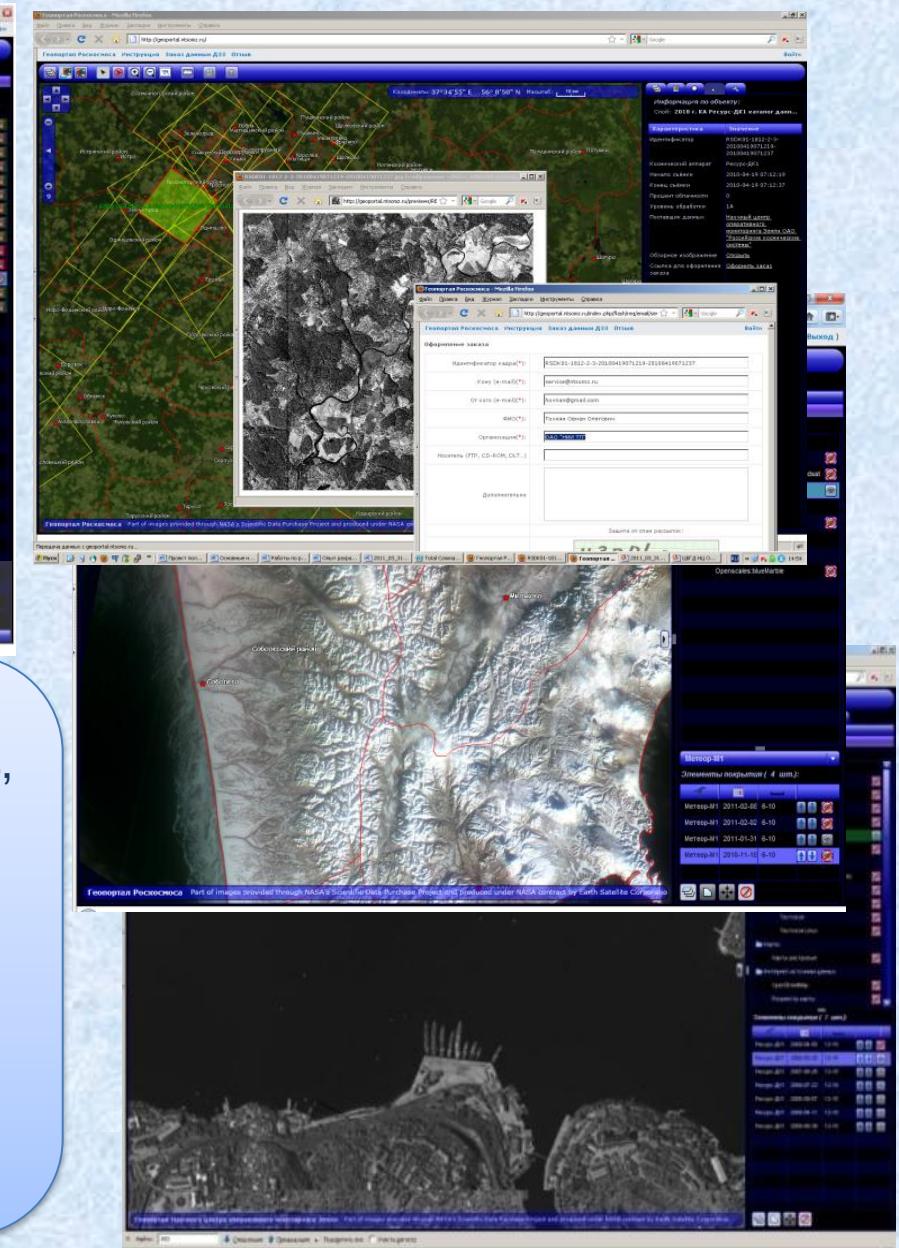

The main page of Geoportal

Roscosmos Geoportal provides operative access, data search, satellites characteristics, remote sensing data and products of its processing ordering, as well as the ability to monitor ground-based sites and facilities in time.

Every day more than 1000 visitors access the Geoportal via Internet.

A strong consumer segment is established

INFORMATION SERVICES. ROSCOSMOS'S GEOPORTAL

Free Access

- Metadata catalogue
- General catalogue of remote sensing data
- Continuous earth surface coating with space imagery data
- Provision of space information and thematic products on customers demands

ROSCOSMOS'S GEOPORTAL

Authorized access

- All features of free access to Geoportal
- Access to thematic data segments and special thematic products
- Very-high resolution data access

Internet

www.gptl.ru

Internet

Launched in December 2010, Roscosmos Geoportal provides online access to information from Russian ERS satellites to a wide range of users and additional opportunities for authorized users
